

start.hub Logistics – the new topic at transport logistic 2019!

For the First time at transport logistic 2019 the new future start.hub Logistics platform brings together interesting and innovative logistics industry start up ideas.

Together with the skills shortage, the digital transformation of the economy is the central challenge facing all companies within the transport and logistics market. **Messe München** and the **DVV Media Group** are contributing their communication brands to bear in a jointly operated "start.hub Logistics" platform.

start.hub Logistics can be found in the middle of Hall B2.213/314 on a 300 m² stand. It comprises a networking area and a central communication stage. It is the venue for getting to know start-up scene players, understanding the relevance of their ideas and concluding a future digital pact.

The bar: Talk to start-ups, partners and investors and check out innovations in the industry's start-up scene.

The stage: There are exciting start-up pitches on every day of the trade fair together with presentations and interviews on every aspect of innovations and start-ups.

The blue sofa: Every day there are gripping interviews with industry players on the DVZ's blue sofa.

The pitch: Start-ups taking part in the pitch were selected by the jury, comprising industry representatives.

The voting: The winner can look forward to an attractive prize! Decide for yourself which start-up idea makes it through to the next round and is allowed to pitch again the following day. The voting tool is available every day until 24:00.
